

Is it Science?

Science Class

Learning Target: I am able to write and explain a definition for the word “science” based on the work I have done during this activity and from my own knowledge.

What does the learning target expect me I have to have understanding about? What do I have to have as an end product, to help show I understand the concept?

What do I think (or the class thinks) will need to be shown to prove I have gained information from the activity to help me reach the target?

What do I think (or the class thinks) will need to be shown to prove I have used my own knowledge to apply to reach the target?

**Observation Lab One
